

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of TROPICAL DISEASE & Health
Manuscript Number:	Ms_IJTDH_29675
Title of the Manuscript:	Ergonomics Workstation Assessment of Musculoskeletal Disorders in University of Port Harcourt
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1. "Going through the questionnaire, the level of measurement is ordinal. Parametric analysis may not be appropriate". The author(s) is yet to satisfactorily address this issue. The issue is about following the principle/rule of each statistics employed. Kruskal-Wallis analysis will be appropriate instead of ANOVA. 2. Kendall's and ANOVA are different statistics. Think ANOVA is assessing mean differences of more than two groups of interval/ratio scale while Kendall's is assessing agreement. Think there is no basis for comparison. Please, don't plays with statistics, follow the rule. Think Kruskal-Wallis will be appropriate instead of ANOVA
