SDI Review Form 1.6

PART 1: Review Comments

	Reviewer s comment	Author s comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	1. All the hematological markers (lymphocyte number, immunoglobulin amounts, etc.) are not specific for TB patients. Therefore, they seem not to be useful for TB markers. 2. Authors should discuss the meanings and the importance of the results in Discussion. I cannot figure out the meanings of the results shown in this paper. 3. Too many careless and grammatical errors were found through manuscript. Many sentences are grammatically incorrect and very hard to read. Authors should prepare manuscript more carefully.	The parameters are not biomarkers for TB. But TB infection has both immunological and haematological effects on the patients. Thus justifying the need to assess these parameters. The findings of the study has been discussed in the Discussion section. However the Reviewers comment is noted and appreciated. The reviewer should please highlight some of the "clueless and grammatically incorrect" sentences.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
