SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The major recommended preventive method is to wash hands with soap in daily routine. Lack of this detail in the control group is an important missing in the study format. Secondly, the long term effects could not be assessed in the current study format. There are also missing parts about the study groups which their thoughts have been asked (who are they, the criteria to be selected, etc). The ethical and institutional permission procedure are not explained in detail. Ethical Issues: The ethical and institutional permission procedure are not explained in detail.	The study was designed for a short time and the long term effects of the product will be determined in our next study. The ethical clearance was also sought from the Research Governing body of the Faculty of Science, Ekiti State University.
Minor REVISION comments		
Optional/General comments
