SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	1. The authors should not mention predictive factors, since it is not a cohort study, in addition they would have to calculate RR and not OR. They are only associated factors. 2. Reference 14 is incomplete.	1. According to your remark, we replaced the term "predictive factors" by "factors associated". Since it is a retrospective case review study, the association between the outcome and the factors should be measured via OR, but not RR. 2. The reference 14 was completed. Thank you for your valuable expertise.
<u>Optional/General</u> comments	In general, the study is interesting and useful.
