SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	There are multiple grammatical changes that need to be made. Sentences have extra periods and spacing in tables should be fixed.	Agreed with reviewer, the article will be revised accordingly.
<u>Optional/General</u> comments	This is a very interesting article highlighting the serotype of Neisseria meningitides causing outbreaks in Ghana. Table 1 is very good and does a great job showing the prevalence of Neisseria, Streptococcus, and Haemophilus in suspected cases of meningitis. Table 2 is also valuable in highlighting the different age groups the infection was found. These findings should be considered after the grammatical changes are corrected.	Agreed.
