

Table 1: Referred Articles versus Comments on Results and Discussion

S/N	Referred Articles	Comments
1	Elisabetta, Z et. Al, "Clustering of Cardiovascular Risk Factors Associated with the Insulin Resistance Syndrome" – Assessment by Principal Component Analysis in Young Hyperandrogenic Women. Diabetes Care, Vol. 29, No.2, 2006.	The manuscript contained only the Result Section with no provision for Discussion. It appears that the Discussion section is subsumed in the Results section in which case the appropriate subtitle should be "Results and Discussion".
2	Thorpe, M.G et. Al, "A Comparison of the Dietary Patterns Derived by Principal Component Analysis and Cluster Analysis in Older Australians". International Journal of Behavioral Nutrition and Physical Activity. Vol. 13, No.30, 2016.	The manuscript contained Results section separate from the Discussion section. The Results section contains the analytical output from the study and detailed explanation of the output with respect to the analyses made. While the Discussion section was centered on the implications of the resultant output of the study with respect to the study population. Note: The explanation found in the Result section invariably accounts for interpretation of the results which should be part of the "Discussion", if strictly applied.
3	Drehmer M et. al, " Brazilian Dietary Patterns and the Dietary Approaches to Stop Hypertension (DASH) Diet-Relationship with Metabolic Syndrome and Newly Diagnosed Diabetes in the ELSA-Brasil study. DiabetolMetabSyndr. Vol. 9, No. 13, 2017.	The structure of this manuscript with respect to Results and Discussion is analogous to Item 2. However, the Discussion section subsumed the Conclusion section. That is, there is no Conclusion Section.
4	Science Domain International Format	Science Domain International format for Results and Discussion Sections are copied and pasted beneath: Results: <i>"Results should be clearly described in a concise manner. Results for different parameters should be described under subheadings or in separate paragraph. Table or figure numbers should be mentioned in parentheses for better understanding".</i> Discussion: <i>"The discussion should not repeat the results, but provide detailed interpretation of data. This should interpret the significance of the findings of the work. Citations should be given in support of the findings. The results and discussion part can also be described as separate, if appropriate".</i>
