PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Albicans is without doubt the species of fungi Candida that more affects the facilities of patients with disabilities in the immune system. But in recent years has increased the reporting of infections by Candida Tropicalis. The forms of identification presented at work may contain several exceptions. Albicans mutant strains are possible not to form or germinative tube, colors of different colonies. I believe that if the authors use molecular evidence for the identification of the yeasts work would be more concise	We do not perform molecular analyzes, but this is a perspective of future work. However, we discussed the importance of molecular analysis in Discussion.
Minor REVISION comments		
Optional/General comments
