SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	This is a relevant study that showed some renal function among HIV positive children and adolescents on highly active antiretroviral therapy without adequate viral suppression. The manuscript is well written and covers important area in medicine.	Thank you
<u>Minor</u> REVISION comments	Reference values and methodological observations (lines 42, 43, 46, 47, 49, 50, 5 and 55-59) should be in methods, not introduction. I suggest changing the location of this information.	The information in the lines noted were removed from the introduction and added in the methodology with their references. This necessitated rearrangement of the references in the body of the text that were highlighted in blue shade. The P values for 2 nd line medications that was omitted initially from table 3 was included.
<u>Optional/General</u> comments	---
