SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	There are multiple grammatical changes that need to be made. Sentences have extra periods and spacing in tables should be fixed.	
<u>Optional/General</u> comments	This is a very interesting article highlighting the serotype of Neisseria meningitides causing outbreaks in Ghana. Table 1 is very good and does a great job showing the prevalence of Neisseria, Streptococcus, and Haemophilus in suspected cases of meningitis. Table 2 is also valuable in highlighting the different age groups the infection was found. These findings should be published after the grammatical changes are corrected.
