PART 1: Review Comments		
	Reviewer's comment	Author's comment(<i>if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here</i>)
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	NONE	
<u>Optional/General</u> comments	Seems to me an interesting study, since it gives information of a metabolic picture that we normally associate to the Western way of life, and there is no information of what happens in geographic zones other than the most industrialized, the interesting thing of the study is that it compares within the same Country of realities, it being evident that genetics is in this case modulated by access to low-quality calories and diets with saturated fats and sugars, which is repeated in the West, South America, South America etc.
