General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	There are flaws and problems with this manuscript that need to be corrected before it can be considered for publication, which are listed below: 1. The authors cite, throughout the text, various drugs and drugs, often using their trade names, without making references to these trademarks and without specifying the dosages used. It is necessary to explain this in details in the text. 2. Figure 1 is of poor quality, and the image is totally out of focus, which makes it unsuitable for publication. This comment also applies to Figure 5A. 3. There is no information new or different from that already existing in the international literature. 4. Most of the cited references are very old and do not translate current knowledge about the pathology addressed. It would be interesting to focus reference research particularly in the last 5 years. It is necessary that all trademark products used and cited in the text be referenced.	
Minor REVISION comments	-----	
Optional/General comments	There are language style flaws that hinder and hinder the reader's understanding of the text.
