

Editor's Comment:

1. I have read the positive comments from all the reviewers.
2. I have also spent time to review again the REVISED MANUSCRIPT (made by the authors) and subsequently made some improvement to it (in RED):
 - (a) Please refer to the file attached on the 'TRACK CHANGES' which I have made to the REVISED MANUSCRIPT.
 - (b) On a related matter, the authors mentioned that they used SPSS 20 for analysis. This can be a copyright issue which the journal publisher (IJTDH) and authors may want to avoid especially when the authors do not have the license. Please ask the authors whether they have the licence. If not, they can just use the chi square analysis in Microsoft Excel software - no need to use SPSS at all.
 - (c) Two common repeated mistakes made by the authors which I have corrected (in the attached file) are as follows:
 - (i) Normally scientific writers avoid beginning a sentence with DIGIT (e.g. 28). In such case, it is spelled out in full (e.g. Twenty eight).
 - (ii) The scientific name (e.g. *Helicobacter pylori*) is written in full for the FIRST time only, subsequently it is suffice just to write *H. pylori*.
3. I give my support for this manuscript to be accepted for publication at IJTDH, with the condition that his revised manuscript is further improved as recommended. PLEASE refer to the attached file that I am enclosing in this email.
