PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The Topic is vague and as a major change is required: An Assessment of the Physico-Chemical and Bacteriological Status of Sachet Water Consumed in Hohoe Municipality, Ghana. The Reference is not arranged properly following any particular format and should be done properly.	The Authors really appreciate your comments. Thanks for your time and energy. Thanks for this comment. The Title is changed as suggested. The initial title was chosen because we did not assess ALL the chemical properties of the samples for example magnesium, iron, etc as suggested by another reviewer. Line 3-5. The reference is well arranged now.
<u>Minor</u> REVISION comments	Methodology for the assessment of TDS should be included	This is included. The meter used measured three parameters including TDS at a go. line 93-95.
<u>Optional/General</u> comments	A table showing the result of the microbiological analysis will show trend across sampling area and maybe included.	Good suggestion. However we were interested in a pool data to represent the large municipality and avoiding too many tables.
