PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The author wrote about the pediculosis and the data collecting in a community of Belém-Pará. The author wrote that 71% of the children study had pediculosis and the major part of study was females. The article is clear however there are minor mistakes.	Concordo com todas as sugestões recomendadas pelos revisores.
Minor REVISION comments	The figures should be cited during the text. The font used on the text was changed during the article. In figure 2 pass to English the information contained in the figure such as "piolho da cabeça" for <i>Pediculus humanus capitis</i> or head lice. The quality of the figures can be improved. Two species of bacteria were not written in italics (<i>Rickettsia typhi</i> and <i>Rickettsia prowazekii</i>). When writing "tifo murino" in the text change to English murine typhus. When to use acronyms to put the meaning of them for example does not have the meaning of CDC, AAP. Up to this methodology item the article looks like a review, so I suggest you use this content, even before the methodology, for a review article and make an introduction and one with the information obtained from the analysis of the data collected in the community. Improve English in some sentences, such as "In the present study, the results of the present study are presented." Correcting graph 1, the information was not correlated with that wrote in the text and the image quality is impaired. In graph 2 put legend on x-axis "age." You can remove this table below the axis information. Explain what is "cachaça"?. In figure 5 complete the subtitle, not all colors were represented in the subtitle. There are some typing problems.	Cachaça is the name given to sugarcane brandy produced in Brazil. It is obtained through the fermentation and distillation of cane juice or molasses. Thanks for the remarks. We modified the initial features to show that this study was not just a literature review study. And for this we elucidate this in the final paragraph of the introduction. We correct what we find in typos. So thank you so much for this note. In the last corrections before the publication we will check again in the final edition before the publication.
Optional/General comments
