Type of the Article	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Much improved manuscript. Myriads of grammatical and typographic errors. Will benefit from English Language editing. I have looked at the attachments and sadly; the authors have not responded to the comments. Authors were to respond saying which revisions were made in the manuscript and where the revisions are located. Responding that all edits have been made does not answer the question. In the same vein; highlighting the edited segments There are still 8 places in the manuscript where the study participants are referred to as subjects. Why are participants still referred to as subjects?
