New title of the Manuscript:	The behavior of Jhum cultivators living in Chittagong Hill Tracts and its relation to malaria in Bangladesh
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
I think that the statistical analysis of this paper should be checked by a statistician, especially my remark about $P = 0$. The authors made their corrections. I believe that it is now the editor's work to improve the English language of this paper.	Thank you for your comment. In fact, maybe we have replied this question earlier. However, I am Statistician and confirm you that the calculation of P-Value is correct and there is nothing wrong with it. The reviewer can find many article with P-value =0.000. STATA always convey you correct result. For your confidence, initially we sent the original research paper with the data which was organized with just importing STATA file. If you need further clarification, we will send STATA file to you. We also made minor edition in revised version 3 manuscript as per your suggestion. We also have added a definition of <i>Jhum</i> cultivation under footnote in page 4 for clarification to reader. We also redesigned the survey site in page 6. I think now the manuscript is ok and more informative to reader.
