

SDI Review Form 1.6

Journal Name:	International Journal of TROPICAL DISEASE & Health
Manuscript Number:	Ms_IJTDH_45309
Title of the Manuscript:	Physiological, Oxidative Stress and Histopathological Effects of Exposure of Albino Mice, Musmusculus to Petrol Generator Exhaust
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Please remove the word 'Albino' entirely from the article, its offensive. Line 45; Your sample size (4 mice) is too small to translate anything. This must be a minor research I guess. Lines 57 to 60 is only a repetition of all you have explained in lines 46 and 47. Please look at it again. What is the exact quantity of feed you fed the animals, is it 100 grams or 10 grams, and is the information really necessary? Please I suggest you say you-'fed all animals equally throughout the experimental period'. Line 69- you pay too much attention to quantity of feed, please channel your interest on the petrol exhaust or oxidative stress. Line 98- why SPSS version 16, this is 2018, we have IBM SPSS up to version 25, please try and upgrade to version 20 at least. Line 103- Out of Date Vehicles? Did you check their expiration date? My dear, Please use an appropriate terminology. Lastly, please who translated the histologic section of the study? Was it you or an anatomist or histopathologist? Please state clearly.	- The word 'Albino' has been removed entirely from the article and replaced with the word 'white' - Line 45: the research is a minor one and we were careful not to use too many animals in view of the current trends towards minimization of animal use in research. - line 46-47 has been deleted and Line 57 – 60 has been referred to in the preceding section where line 46 – 47 is located. - This phrase 'fed all animals equally throughout the experimental period' has been used to replace the indicated quantity in the experimental design - Line 69- this was done for proper analysis of the activity quotient. - Line 98- the SPSS version has been updated to version 20. - Line 103- this has been replaced with 'less fuel efficient vehicles' - A histopathologist did. This has been stated clearly in the section 2.5
Minor REVISION comments		
Optional/General comments	This article presented results concerning 'Physiological, Oxidative Stress and Histopathological Effects of Exposure of Mice, Musmusculus to Petrol Generator Exhaust'. It is an interesting research.	Many thanks

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
