|                          |                                                                                                               |
|--------------------------|---------------------------------------------------------------------------------------------------------------|
| Journal Name:            | <a href="#">International Research Journal of Pure and Applied Chemistry</a>                                  |
| Manuscript Number:       | 2014_IRJPAC_9555                                                                                              |
| Title of the Manuscript: | Red Onion skin extract-formaldehyde resin as Corrosion Inhibitor for Mild Steel in Hydrochloric Acid Solution |
| Type of the Article      | Original Research Article                                                                                     |

**General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

**PART 1: Review Comments**

|                                            | <b>Reviewer's comment</b>                                                                                                                                                                                                                                                           | <b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><u>Compulsory</u></b> REVISION comments | -                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                      |
| <b><u>Minor</u></b> REVISION comments      | If possible, please add the explanation or data that would support the structure of the synthesized ROSE/formaldehyde.                                                                                                                                                              | <i>Thank you, but the structure was proposed based on the reaction of Aldehydes. We did not consider it necessary to add explanation or data.</i>                                    |
| <b><u>Optional/General</u></b> comments    | Overall, the manuscript showed its originality in investigation of the corrosion inhibition efficiency of the synthesized ROSE/formaldehyde towards mild steel in 1M HCl solution, therefore it would be appropriate to be published with some additional data (as mentioned above) | <i>Thank you</i>                                                                                                                                                                     |
