SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Research Journal of Pure and Applied Chemistry
Manuscript Number:	**2014_IRJPAC_9555**
Title of the Manuscript:	**Red Onion skin extract-formaldehyde resin as Corrosion Inhibitor for Mild Steel in Hydrochloric Acid Solution**

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	**Authors' response to final evaluator's comments**
The authors have revised the paper as suggested and if the structure of ROSE/formaldehyde resin is just a proposed structure then it should be enough for this publication because the main focus of this paper is the presentation of results concerning the corrosion inhibition activity of the resin and not focusing on the structure-activity relationship.
