SDI Review Form 1.6

| Journal Name: | Journal of Advances in Biology & Biotechnology |
|--------------------------|--|
| Manuscript Number: | Ms_JABB_27899 |
| Title of the Manuscript: | Total Phenols Content and Antioxidant Power of Manuka Honey Is Related to 24hr Cytotoxicity Towards MCF-7 Breast Cancer Cells |
| Type of the Article | Original Research Article |

General guideline for Peer Review process:

This journal's peer review policy states that <u>NO</u> manuscript should be rejected only on the basis of '<u>lack of Novelty'</u>, provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, |
|-------------------------------------|--|---|
| | Reviewer s comment | correct the manuscript and highlight that part in |
| | | |
| | | the manuscript. It is mandatory that authors |
| | | should write his/her feedback here) |
| <u>Compulsory</u> REVISION comments | Page 1, Lines 3-5 | |
| | It is essential for the authors to revise the title of | |
| | their manuscript along the lines of "Manuka honey- | |
| | induced cytotoxicity against MCF7 breast cancer cells | |
| | is correlated to total phenol content and antioxidant | |
| | power." | |
| | Page 2, Lines 42-50; Page 6, Line 216 | |
| | It is essential for the authors to disclose the | |
| | composition/ major constituents (e.g. sugar etc; in | |
| | percentage or other relevant unit) of Manuka honey | |
| | (varying UMF) used in the present study | |
| | Page 2, Lines 42-50 | |
| | (i) It is essential of the authors to justify the basis of | |
| | selecting Thyme honey as the control of the present | |
| | study. | |
| | (ii) The current findings of Thyme honey need to be | |
| | compared to previous reports. | |
| | Page 6, Line 216 | |
| | The authors acknowledged that other honey | |
| | constituents might also contribute to the antioxidant | |
| | power of Manuka honey. As such, it is essential for | |
| | the authors to justify the basis of selecting only one | |
| | antioxidant parameter (FRAP in particular) to | |
| | demonstrate the antioxidant properties of Manuka | |
| | | |
| | honey. | |
| | Page 4, Lines 142-143 | |
| | It is unclear as to why 24 h was eventually chosen. It | |
| | is essential for the authors to clarify it further in the | |
| | text. | |

| | Plagiarism issue: Turnitin originality report indicates 17% similarity (excluding bibliography). Nevertheless, it is essentially the authors' responsibility in ensuring the originality of the content. | |
|---------------------------|---|--|
| Minor REVISION comments | Figure 1 The authors are encouraged to add the following at the end of the captions: "Results are presented as mean values of eight samples of two different days/datasets." | |
| Optional/General comments | The manuscript is generally well-written with their findings on the correlation of Manuka honey-induced cytotoxicity, total phenol content and antioxidant power clearly illustrated and discussed. The majority (74%) of the references are up to date. Grammatical and editorial errors are kept minimal. | |
