

SDI Review Form 1.6

Journal Name:	Journal of Advances in Biology & Biotechnology
Manuscript Number:	Ms_JABB_43608
Title of the Manuscript:	Harvesting of <i>Chlorella variabilis</i> Biomass by <i>Moringa oleifera</i> Seed-Induced Sedimentation.
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	In figure 2, why did the concentrations affect the sedimentation time of the powders, but not of the filtered?	Figure 2 shows that the rate of sedimentation depended on concentration of the seed used for both powder and filtered extracts.
Minor REVISION comments	In figure 4, why was there no difference in sedimentation time between 7g/L and 10g/L?	This implies that the extract from 7 g/L was already saturating for the concentration of <i>Chlorella</i> used. With higher concentration of <i>Chlorella</i> , there might be difference between the sedimentation rates achieved with 7 g/L and 10 g/L
Optional/General comments
