

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Agriculture and Ecology Research International
Manuscript Number:	2015_JAERI_16741
Title of the Manuscript:	Efficacy of Kensil Fine, a diatomaceous earth, when applied to protect maize stored under simulated and real farmer situations in Kenya

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The suggestions posted the previous time have not been taken into account by the author. In the new version of the manuscript bibliographic citations do not match, the introduction is long, the materials and methods are unclear to me.	I have matched the references with () which were in some and not others, but if I missed the point, please direct me using line numbers. I have suggested words/phrases or sentences for deletion (yellow with line crossed) and yellow without line crossed to be adopted which has reduced the introduction considerably. Materials and methods have been re-organised into short paragraphs for flow and clarity. The opening sentence of the results was moved to materials and methods as suggested. The conclusion part was improved while recommendations were found not to fit and so deleted.
