SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	It is interesting to know that the DFH is critical to normal maturity of rice grown in the high latitude region. Language needs to be revised to make the content correct and clear as indicated in the manuscript by PDF annotation tools. It is hard to understand the meaning of some sentence as marked by yellow line. It is also necessary to explain the concepts such DFH, DSH and DTH, which are not showed in the section of material and methods.	Thank you. Thank you for your careful check. The red lines parts were corrected and yellow lines parts were rewritten for easy understandings. The meaning of concepts cannot be understood. This is only definition. But the reason why DFH and DTH were measured was added in the present manuscript.
Minor REVISION comments		
Optional/General comments
