

Editor's Comment:

Manuscript title: An Effective Cloning, Heterologous Expression and Physiological Activity in *Lactococcus lactis* NZ9000 of Catalase Gene from *Escherichia coli* DH5 α .

Comment: While the manuscript is highly scientific with molecular biology research involving genetic manipulation and cloning, it requires English editing for clarity as suggested by some of the reviewers. I am in support of Dr. Ravikumar's correction to make the manuscript suitable for publication. The manuscript is good and should be accepted only after the minor corrections are made as highlighted by Dr. Ravikumar. The plagiarism issues should be corrected.
