

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Advances in Mathematics and Computer Science
Manuscript Number:	Ms_JAMCS_39635
Title of the Manuscript:	Improved FTWeightedHashT Apriori Algorithm on Big Data using Hadoop-MapReduce Model
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
In this THIRD revision (i.e., fourth time the reviewers read this paper), the authors presented an algorithm called FTWeightedHashT Apriori to improve the existing WeightedHashT algorithm [4] by using a Hadoop-MapReduce model. S1. After raising the same concerns three times, the authors finally implemented one (i.e., WeightedHashT) of the two existing algorithms for comparison. W1. As admitted by the authors, the authors “almost corrected” some but not all typos. There are still unacceptably many grammatical errors and typos (e.g., “are increment”, “different value”, “each mapper process”, “longs hours”, “online coursed”, “to takes”) in the THIRD revision!	Dear Pro. Anonymous We admit that all your reviews are improving the manuscript and we are thankful. We thought that, We should not to implement the existing algorithms, rather than, we only collect their results (as many researchers did). After your and another reviewer insistence to implement the exist algorithm, we directly follow the instructions and implement it, and obtain the results of both algorithms and show more results for different values of wsupport. Thank You Very Much ^_^ We did a careful proof reading. However, the reviewer “Sud” stated that “If cannot find the mistakes, you can use some standard tools”. Look Prof., 4 out of 6 mistakes you mentioned were correct, but the tools we used make them wrong. Whatever, all mistakes you stated are corrected again, and another proof reading is done. If there any mistakes, we are humans at the end, and English is not the mother language. Now, after all your significant comments, we are looking for the acceptance of the manuscript.
