

SDI Review Form 1.6

Journal Name:	Journal of Advances in Mathematics and Computer Science
Manuscript Number:	Ms_JAMCS_38975
Title of the Manuscript:	A New Generalization of Weibull Distribution
Type of the Article	Original research paper

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	1. Authors need to give some characterization theorem to describe the new generalization of Weibull distribution. 2. In practical application, authors also need to consider some conditions for censored samples in this paper. 3. Authors need to give some practical examples to explain their application in censored samples. 4. Authors also need to explain the motive of choice the parameters for the prior distribution.	
Minor REVISION comments	1. In the notations, the English style and the clarity of exposition need to improve, for example : (i) page 101 11th and 16th columns, authors need to rewrite it; (ii) page 101 19th column, "Figures 1-2" instead of "figures 1-2"; (iii) page 102 6th column from the bottom, authors need to rewrite it; (iv) page 104 1st column from the bottom, "Table 1" instead of "table(1)"; (v) page 105 3th column, "Table 2" instead of "table(2)"; (vi) The format of the reference is not consistent, some lack of age, etc.. 2. I suggest that authors also need a good proof-reading by a scientific writer.	
Optional/General comments	No.
