

**Editor's Comment:**

I am Orthopedic Surgeon. I have read the primary MS and the revised too. Accordingly I have read the comments of the two reviews. The first Rev. has graded the revised MS with 9 and the second wrote: The topic of manuscript is very interesting but badly presented, documented and discussed. Furthermore, the pictures are of poor quality both in terms of pixels that as projections. The paper is too lacking in quality and documentation in order to be considered as publication in this journal.

Accordingly I recommend this MS to be assigned to at least one additional reviewer.

**Editor's Details:**

Dr. Panagiotis Koroivessis

Chief Orthopaedic Surgeon, Orthopaedic Department, General Hospital "Agios Andreas" Patras, Greece
