

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Advances in Medicine and Medical Research
Manuscript Number:	Ms_JAMMR_44936
Title of the Manuscript:	Assessment of clinical outcomes of outpatients following chest X-ray imaging performed at King Abdul-Aziz Medical City, Saudi Arabia, Riyadh
Type of Article:	

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>1. The data was collected from PACS. The national guard hospital is divided into two units: one for paediatric which is known as king Abdulaziz children hospital and other known as King Abdulaziz Medical city which is mainly specialized for only adult patient. Hence the data was collected randomly from the King Abdulaziz Medical city based on the availability of medical record as in the PACS.</p> <p>Hence , it should not be stratified random sampling technique because it includes proportionate/ disproportionate method) , so you can mention as non randomized purposive or convenient sampling technique was used.</p> <p>2. a. References were inserted in relevant to the contexts b. Reference number was inserted accordingly</p> <p>Yes , you are included , ie., 26 in front, 21,22 reference at back. But always go in ascending order way (in between u can mention previous no) So , kindly change the 26 reference number as continuous number of 21 in superscript and also in reference part , Hence after 21 the other continuous reference number will get changed</p>	<p>Yes we do agree with your suggestion to modify our statistical analysis to convenient sampling technique, Hence I do replace.</p> <p>Accordingly reference numbers were arranged in ascending order.</p>
