SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	1. The author did not specify the mode of administration of streptozotocin which is important for the diabetes research article. 2. Diabetes research on herbs conduct following the determination/confirmation of blood glucose level which was missing in the manuscript. 3. The reference of selecting the dose moringa extract was not found as well as for the dose of streptozotocin. 4. The methods for MDA and histological studies is missing in the manuscript. 5. Statistical analysis (SPSS software) was not mentioned in the study. 6. The author did not explain the important of the study on the neurons morphology with regard to the Worldwide incidence and the prevalence. Ethical approval was not mentioned	It's mentioned – line 84-85 This is within the conventional dosage used in several investigations (reference is being provided; we confirmed rational through pilot study) Pilot study was conducted; and a suitable sub-lethal dose was adopted Protocols are known to be standards procedure not usually included in articles, once the methods are stated. For histology in particular only the names procedures are expected to be mentioned in articles SPSS Version: SPSS 22.0 This is a growing area of research interest; our report included our objective observations; hence a report of our experimental condition and not global prevalence etc.
Minor REVISION comments		
Optional/General comments
