

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Advances in Medical and Pharmaceutical Sciences
Manuscript Number:	2014_JAMPS_15989
Title of the Manuscript:	MORINGA LEAF EXTRACT AMELIORATES CEREBRAL CORTEX TISSUE DAMAGE IN STZ-INDUCED DIABETES CONDITION
Type of the Article	

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The author did not make the suggested recommendations for the manuscript. The same structure and presentation, which do not show the importance of the findings, are maintained. The foundations of the study and the discussion of the results remain poor because the manuscript contains only 12 references to works published more than seven years ago. Tables and figures remain poorly presented.	Attention was sincerely paid to suggestions made and the ones we considered necessary were made; others we gave reasons for as we considered them suggestions that they are. Brain damage in STZ-induced diabetes mellitus is not a popularly reported condition; for the references, what matters the most, first, is the relevance and appropriateness of the references. Figures- as photomicrographs are being presented following globally accepted standards and format; not very many authors take the pain to include such levels of details on figures. Reviewer should rather suggest how otherwise such figures could have been presented. While his/her opinion is respected, scientists' purposeful and methodical choices of presentation of research should be respected; as such they should not be forced to conform to mere opinions of others. Tables could at best be presented as tables; editorial team could add value to colouration if considered most necessary.
