

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	Ms_IJBcRR_19825
Title of the Manuscript:	Effects of Monosodium glutamate on Electrolytes and some Biochemical parameters in Rats
Type of the Article	International Journal of Biochemistry Research & Review

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1. In relation to first question, I'm not agree with the response of authors. In according with the figure 1, the bars with different alphabet are significantly different from control group. There is a letter b above the bar with 1% and 5% of MSG, similar to figure 2 which represents the potassium concentration. In this way, the results to sodium and potassium concentration must have the same interpretation. The figure 1 is wrong ? If yes, correct the figure. If no, change the results and conclusion and add a paragraph in the discussion about sodium. 2. Was inserted the space between the number and the symbol in just a few places in the abstract and results. Please correct all.
