SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Compulsory REVISION comments	The authors have to review the units of the assay: free radical scavenging ability of the extracts against DPPH. The authors have to do a statistical analysis for the antibacterial activity (zone of inhibition). In the manuscripts on line there are many references about of the species used in this research, the authors could consult this manuscripts and complete the discussion. In the manuscript there are other comments.	The standard units are used. This has been done by using SPSS Mean error bar. This manuscript centers on the mixture of the herbal plants and not on the individual plant, and we can boldly say, to best of our knowledge, that no Author(s) has combined these plants. So the issue of consulting other manuscripts does not arise.
Minor REVISION comments		
Optional/General comments
