

SDI Review Form 1.6

Journal Name:	Journal of Advances in Medical and Pharmaceutical Sciences
Manuscript Number:	Ms_JAMPS_26367
Title of the Manuscript:	Duct Tape with Adhesive Cyanoacrylate Versus Cryotherapy in the Treatment of Warts
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>Although the manuscript is overall interesting, there are several issues that the authors need to address.</p> <p>1.- The introduction would benefit from a brief review of the literature of previous studies that show the efficacy and safety of Duct tape (Focht, 2002). It will also help to add some of the theories about its mechanism of action, or at least suggest how does it work.</p> <p>2.- The authors describe what is and the uses of cyanoacrylate in medicine, but they failed to mention which is the objective of adding this product to Duct tape. Do they want to hence the adhesion of the duct tape to the skin or increase the occlusion/and or maceration of the wart? Is there any other study showing the efficacy of this combination for the management of viral warts? Please specify.</p> <p>3.-The manuscript has several grammar mistakes. I suggest a review by a native English speaker.</p>	<p>1. The mechanism of action of duct tape on warts is still unknown; one of the theories is that the skin underneath the tape starts to break down a little bit, stirring up a local immune response that attacks the human papillomavirus. Another possibility is that the tape "debrides and debunks" the wart, removing some of the top (and, unfortunately, the skin around the wart) whenever it's pulled off.</p> <p>2. In the treatment of warts, applying cyanoacrylate directly to warts, the cyanoacrylate polymerizes and forms a polymer coating which inhibits development of the warts, the cyanoacrylate is securely stuck, and the entire or at least parts of the warts can be removed easily and painlessly. By repeating the treatment, warts can disappear completely.</p> <p>3. The manuscript was revised by an expert for grammar and spelling mistake</p>
Minor REVISION comments		O.K
Optional/General comments		O.k
