

SDI Review Form 1.6

Journal Name:	Journal of Advances in Medical and Pharmaceutical Sciences
Manuscript Number:	Ms_JAMPS_26580
Title of the Manuscript:	Antibacterial Susceptibility of Heavy Metals Tolerant Bacteria Isolated From NILEST Tannery Effluent
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	• In line 49 (94): why you use NCCLs 2000 as reference although CLSI 2015 is now available. • In line96: change calculated with were calculated • Change title of table 1 to Microscopical and biochemical.....instead of biochemical • In line 122: (++) = Mannitol Fermentation do you mean strong Mannitol Fermentation • In the abbreviation of table 1 you do not mention CAT • It is better to change table 2 to histogram • The spectra of activity of Vancomycin, Teichoplanin and Telavancin, are limited only to	That was the standard available to me at the time of this research. I hope to go for the CLSI 2015. Corrected. Changed. Yes, but have been revised to (+). CAT= Catalase and has been included. Table 2 have been changed to histogram.

SDI Review Form 1.6

	Gram-positive bacteria, why you use them for gram negative bacteria • Cephalexin is a first generation cephalosporin. It has a weak activity on some gram negative bacteria. Cephalexin is not active against Pseudomonas species. why you use it and how strain IS04 is sensitive to this antibiotic • In addition AMP, AMX do not act on Pseudomonas Therefore you must revise the suitable antibiotic that you can use for each isolate. Moreover you should change %of resistance , NAR, MAR INDEX in the table and discussion	Your views were considered and laboratory re-test was carried out using more suitable antibiotics (see revised manuscript). %of resistance , NAR, MAR INDEX in the table and discussion have been changed
Minor REVISION comments	None	
Optional/General comments	Add some new references 2015 and 2014	New references have been added.
