

## SDI FINAL EVALUATION FORM 1.1

### PART 1:

|                          |                                                                                                            |
|--------------------------|------------------------------------------------------------------------------------------------------------|
| Journal Name:            | <a href="#">Journal of Advances in Medical and Pharmaceutical Sciences</a>                                 |
| Manuscript Number:       | Ms_JAMPS_28571                                                                                             |
| Title of the Manuscript: | Hepatoprotective activity of Nigella sativa oil against Antitubercular drug-induced Hepatotoxicity in Rats |
| Type of Article:         | Original Research Article                                                                                  |

### PART 2:

| FINAL EVALUATOR'S comments on revised paper (if any)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Authors' response to final evaluator's comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1. The 4<sup>th</sup> answer given by author is surprising as How you examine the anti necrotic and anti-inflammatory effect with naked eyes. If it is possible with some procedure than please suggest me how this could be possible.<br/>Answer by Author against my comment Anti-inflammatory and anti-necrotic effect was not observed. It was only with the help simple microscope and naked eye we could see there was anti-inflammatory and anti-necrotic effect.</p> <p>2. Author fails to highlight where all the changes have been done as per my suggestion except one or two places in the manuscript.</p> <p>3. The answer for the 5<sup>th</sup> number query is not properly solved or explained.</p> <p>4. Once again I have humble request to you that there is lack of novelty in this work as mentioned in the earlier comments.<br/>Please see this research paper of year 2008<br/>Jadhav, R. R., et al. "Effect of nigella sativa oil on hepatotoxicity induced by antitubercular drugs in albino rats." <i>INDIAN JOURNAL OF PHARMACOLOGY</i>. Vol. 40. A-108-109 KANARA BUSINESS CENTRE, GHAKTOPAR, MUMBAI, 400075, INDIA: MEDKNOW PUBLICATIONS, 2008.</p> <p>5. With reference to your answer for query number 2<sup>nd</sup> if facilities are not available with you than why you mentioned the Histopathological studies in the research plan and why you mention that hematoxylin and eosin staining in the section 1.4. ???</p> <p>6. Conclusion need more polishing related to sentence designing and scientific writing.</p> <p>7. Dear author If possible write in brief related to the mechanism of action of toxic drugs in the introduction section, as the first considered part of manuscript is introduction part not the discussion.</p> <p>8. Still lot of grammatical and writing errors are there in whole manuscript.</p> <p>9. Scientific writing is very poor</p> <p>10. Lack of connectors' in between the paragraph specially in the introduction section.</p> | <p>1. Sir anti-necrotic and anti-inflammatory can be examined by hitopathological examination, in my study it is simple microscopic examination. Under the light microscope the lesions we saw we conclude that it is necrotic region and when we saw coeffect of drug and N. Sativa we did not find any lesion so our study concluded that the oil has decreased the necrotic region.</p> <p>2. Some of the changes are now shown in red.</p> <p>3. Answer for the 5<sup>th</sup> query is now properly solved in the materials methods which is indicated by red,</p> <p>4. Sir i tried a lot to get the paper but i did not find it. I also tried it in the journal but i did not find even there. This is the work which has been done, i tried my best to update the paper and put some new information.</p> <p>5. Hitopathological is now changed to 'Light microscopic observation.'</p> <p>6. Conclusion is further improved as per the suggestion</p> <p>7. Mechanism of action of the drugs is written in the introduction section which is in red color.</p> <p>8. grammatical and writing errors are corrected now</p> <p>9. Scientific writing is improved</p> <p>10. Connectors in introduction is improved</p> |
