SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	English Language Should Be Reviewed	Manuscript adjusted accordingly
<u>Minor</u> REVISION comments	Dose used should be justified There should be analysis of the chemical composition of plant extract Justify the use of methanol as a solvent (why not ethanol or acetonitril.....)	We arrived at the dose used after literature search which revealed that high dose of the extract has some toxicological effect. Methanol was use for the extraction because it extracts most of the compounds in the plant. All polar and some non-polar substances readily dissolve in methanol.
<u>Optional/General</u> comments	References in the text written in numbers but in the text it should said (as reported by "name of the author ") then ref no Generally it could be accepted after revising English language.	Manuscript adjusted accordingly

As per the guideline of editorial office we have followed VANCOUVER reference style for our paper.
