

Editor's Comments:

This is an interesting case report of an unusual complication associated with placenta percreta. I had edited the authors' revision as per my revised text of manuscript. I recommend that the authors study my corrections about grammatical and syntax problems noted in the manuscript.

Author's feedback:

Thank you very much to edit the manuscript. I understand the problems of grammatical error and syntax problem and their corrections. Therefore I am sending the same file which you edited. Please let me know if I need to do anything further.
