SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Authors are advised to seek help by an expert in order to correct mistypings, grammatical errors and in general to improve poor English language quality.	
<u>Minor</u> REVISION comments	1/Conclusions should be drawn and discussed in relation to the international literature. Just a list with conclusions is not enough. For example, food well known to contain anti-oxidants in the list [e.g. green tea], play a particular role in avoiding oxidative cell stress promoting carcinogenesis. Some others like chocolate or simply fat containing food have to be faced with reservation and scepticism. 2/ The sample is relatively small and therefore authors should state what were the limitations of the patients sampling	
<u>Optional/General</u> comments	A very interesting piece of research that is worth of publishing, provided that authors discuss their results as mentioned above
