PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The scientific content of this report is important. The data provided are quite useful and informative. However the text is unacceptable in terms of English language quality. In many places and especially in Abstract, the text is incomprehensible and misleading. I would strongly advise the authors to seek consultation. Perhaps one of their colleagues having a good knowledge of the English language and biomedical terminology could help them to correct English text In its present form the paper cannot be accepted, solely because of the very bad English used and therefore revision is required
