

Editor's Comment:-

The manuscript deals with important subject but there are numbers of queries that have to be addressed.

1. The manuscript was not prepared according to journal regulations (see instruction for authors).
2. The selected dose of paracetamol and silymarin need closer explanation.
3. The final concentration of active ingredient in plant product should be added. All such active substances should be presented.
4. Clinical observations typical for toxicological studies are missing (mortality, water and food consumption, body weight gain, etc.)
5. Discussion is scanty and very superficial. Limitations and clinical implications of the study should be added.
6. Some parts of manuscripts are unclear.
7. There are number of punctuation errors.
8. List of references should be rechecked. The current version does not pass criteria of any journal (see punctuation, journal names, etc).

Author's Feedback:-

1. Actually, the manuscript was prepared according to the journal's instruction, as we used the journal's template downloaded from the author guideline section.
2. We selected 300mg of paracetamol after preparing 5% solution from 5g of paracetamol in 100ml of distilled water, and 200mg/kg body weight of silymarin based on previous works done in that line.
3. We did a phytochemical screening of the aqueous extract of the plant which contain the active substances.
4. We didn't carry out toxicological studies, but water and food consumption was mentioned. There was no mortality recorded throughout the experimental period. And from the literature we had a report which says that: the LD50 of the aqueous extract of the stem bark of *Boswellia dalzielii* is above 3000mg per kilogram body weight, which was considered to be moderately non-toxic when administered orally (it is in the introductory section). These was why we didn't bother ourselves to do toxicity or LD50 test.
5. The discussion section is now upgraded
6. Unclear parts of the manuscript should be specified.
7. Punctuation errors should also be pointed out, for us to make corrections.
8. List of references has been rechecked.
