SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Compulsory REVISION comments	It is better if the authors could conduct phytochemical screening for each fraction to determine the active ingredients. The objective should more precise. This will answer though, ethyl acetate showed highest antibacterial activity, it is much less than the crude extract Remove all the references in the conclusion. The authors should conclude their own results Grammar should be improved	The research is still ongoing by the authors and the isolation of the active components of each fraction is the main focus of the extended research. Corrected Removed. Done and indicated with yellow colouring
Minor REVISION comments		
Optional/General comments
