SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	1.The statistical method used in the study (Mann-Whitney U-test) does not agree with the data presented in the table and diagram: the authors should give individual values (points) for each person in each studied group (20 points putted in two columns in a diagram); minimum, maximum, mediana, 25% -and 75%- percentiles for each the group should be placed in a table (but not mean +/- SD)! Difference was regarded as significant when $p < 0.05$. 2.Language (English) should be substantially improved (re-written), because the poorly written text hinders understanding. 3. Since difference was not found, the title of the manuscript and legend for figure should be changed as follows: "Hand Dominance and WAIS-R Block Design performance" and "BD scores in right- and left-handed groups".	
<u>Minor</u> REVISION comments	none	
<u>Optional/General</u> comments	For better understanding the text should be substantially improved.
