

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Advances in Medical and Pharmaceutical Sciences
Manuscript Number:	Ms_JAMPS_40957
Title of the Manuscript:	Prevalence of Renal dysfunction and its relationship with CD4 and TNF alpha of HIV patients on Anti-retroviral Therapy in Port Harcourt.
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The article still has several issues to be considered. As this study is a cross sectional study, we can say that CD4 number and TNFalpha correlate with eGFR but does not predict the prognosis of eGFR unless the authors conduct prospective study. In Table 2, TNFalpha value between Renal impaired and normal are 38.51±22.40 vs 67.57±31.15. Is there statistical significance? Results sections are too redundant. Absolute value is shown on Table and authors are not required to repetitively show the value. There still so many typo errors, spaces comma and also line 208, sentence is incomplete. I doubt the quality of English editing service.
