SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	- In structured abstract the sections should be the following: Introduction or Background, Material and Methods, Discussion and Conclusion; in this systematic review it would be better an unstructured abstract; - authors should simplify the chapters of the manuscript for example as follows: Introduction, epidemiology, aetiology, etc, and they should reduce subchapters that create confusion in the reader.	This is a general review and not a systematic review I have been asked to change the format of the abstract to non structured abstract and I have done it.
<u>Minor</u> REVISION comments	- Authors should not use abbreviations in the abstract.	PASOP was included as is done in other journals to reduce the number of words in the abstract as other journals accept abbreviations provided the full word has been used initially and the abbreviation has been put in immediately included in the beginning but if you still insist the change would be made but other journals accept this.
<u>Optional/General</u> comments	Manuscript of good standard but needs structural adjustments.	Please suggest the adjustment you want.
