SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Compulsory REVISION comments	A worthwhile manuscript. A good review of an interesting topic. I suggest changing the title to "Radiation-Induced Sarcomas" The 2 sections on role of chemotherapy and radiotherapy can be combined into one. However, the section on role of chemotherapy is vague and needs to be clarified. There are plenty of spelling and grammatical errors. I recommend a thorough edit for such errors, A few are provided below: Summary: "Objective" "Second" should say "Secondary" "Radio" should say "Radiation" Appeared in a radiated area, in a patient Introduction: Radiation therapy is a loco-regional treatment ...and the most serious are radiation-induced sarcomas ...the secondary cancers ...designated poor prognosis ...parietal? ...occurring in a patient ...Oncology, Rabat, Morocco ...a review of the literature Patients and Methods ...Patient is 64	The article was written in good English Radiation - induced sarcoma: A case report" We took into account the grammatical errors The faults have been corrected We have taken account of the remarks

SDI Review Form 1.6

	...presented with a recurrence in his left cheek and orbit ...then the patient lost ...swelling of his left cheek ...furrow was obtained ...observed an invasion Discussion Prevalence is low and of the order... ...Remove: The Treaties ...Others ...retinoblastoma. Example conditions include von Recklinghausen disease... ...in the creation of ions and hydroxides causing ...Sentence needs to be changed: leiomyosarcoma induced radio of orbit, jejunum and... ...111: sarcomas also have high potential for metastasis ...diagnosis is often late in the disease course	We have taken account of the remarks
<u>Minor</u> REVISION comments	(none)	
<u>Optional/General</u> comments	While this manuscript reviews radiation induced sarcomas including genetic predisposition, histological type, latency period, treatment, and prognosis (I suggest to organize the review in this order), the review can certainly be expanded upon. It would also be pertinent to consider epidemiological factors	We have taken account of the remarks
