

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Cancer and Tumor International
Manuscript Number:	Ms_JCTI_31424
Title of the Manuscript:	Case Report of Prolonged Stable Disease with Modified Schedule Sunitinib in Metastatic Renal Cell Carcinoma
Type of Article:	Case Report

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
There are lack of information about tumor staging. According to the authors: "The patient no longer has his old histopathology report which could give us the information regarding the tumor staging". However in the text they describe: "Left radical nephrectomy was done with the pathological diagnosis of moderately differentiated renal cell carcinoma extending to renal pelvis and peripelvic adipose tissue and revealing tumor emboli in many lymphovascular spaces". If they do not have the patient's histopathological history as to justify the above assertions? The text should be changed by placing the staging. A pathologist should describe the histopathological findings, with their proper classification.	Dear Editor/Reviewer We were able to retrieve the patient histopathology report (Dated:10-7-2008) from the pathology department on special request from your side. The same is attached with this mail after anonymization. The report states that the patient is a case of Renal Cell Carcinoma (RCC). Further, we understand that the pathology report is not necessary to decide the staging of the cancer in this case. The CT-scan images clearly show that the cancer is spread to the lungs. Hence, this is a stage-4 cancer patient (RCC with lung metastasis). Kindly get back to us if you have any further queries. Regards
