SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	-Abstract: a too long section with unnecessary details (we don't need to know the parts of the market in the abstract section) -No scientific language used: it could be also published on a general interest journal - The section "Operational Definition of Terms" is not necessary for scientists. -The section "BRIEF LITERATURE REVIEW" is too long and consists of basic information known to the health professionals. -A study should obtain ethical approval , if needed, from an official scientific organism responsible for studies in every country. "ethical clearance obtained from the head of the market": this does not match to medical studies.	Abstract adjusted to contain necessary details. Operational definition was initially added due to the fact that a non scientist can read and understand but removed as suggested to accommodate various readers including scientist, health professionals, etc. Literature review has been cut short. A permission was actually obtained from village head and this replaces ethical approval as stated in the manuscript.
Minor REVISION comments	Grammatical errors	Corrected.
Optional/General comments
