SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	None	
<u>Minor</u> REVISION comments	As the Authors state, diagnosis of aggressive angiomyxoma is somehow difficult because of its rarity: if possible, it would be interesting to get a picture of the macroscopic look of the mass, and, even better, of the mass at physical examination. It would also be interesting to get some more details about the surgical technique.	Unfortunately, the picture of the mass is not available. A note on the surgical procedure has also been included in the case presentation.
<u>Optional/General</u> comments	Aggressive angiomyxoma is rare, so case reports are needed to improve diagnosis and treatment.	Agreed. The statement has been added in the conclusion.
