

Editor's comments:

Subject: Editorial decision for manuscript number 2017_JCTI_34621

Manuscript Title: **AGGRESSIVE ANGIOMYXOMA PRESENTING AS A RECURRENT CERVICAL POLYP – A CASE REPORT**

Type of Article: **Case study**

I reviewed the revised manuscript.

The main problem of this manuscript is that the authors didn't provide the proofs of aggressive angiomyxoma.

Unfortunately, the revised manuscript has not solved the problem yet.

Additionally, there are some problems to clarify or correct.

1. Please remove the reference in the abstract.

2. There are two figures Fig.2, Fig. 3.

Where is the Fig. 1?

3. The text describing the figures should be inserted in the text.

Editorial decision: Revision required

Authors' feedback:

The main problem of this manuscript is that the authors didn't provide the proofs of aggressive angiomyxoma.

WE ARE PRACTICING IN RESOURCE LIMITED SETTING WHERE HISTOPATHOLOGY SERVICE IS GENERALLY UNAVAILABLE IN MANY CENTERS AS WELL AS IMMUNOHISTOCHEMISTRY. WHERE IMMUNOHISTOCHEMISTRY IS AVAILABLE, ITS ONLY LIMITED TO BREAST PANELS AND MOST TIMES PATIENT CANNOT AFFORD TO PAY. IT IS VERY CORRECT THAT IMMUNOHISTOCHEMISTRY SHOULD BE PERFORMED TO DISTINGUISH THIS LESION FROM OTHER ANGIOMYXOID LESION, WE WERE LIMITED BY ITS UNABILITY WHICH FORM PART OF THE LIMITATION OF OUR STUDY.

1. Please remove the reference in the abstract-DONE.

2. There are two figures Fig.2, Fig. 3 Where is the Fig. 1?-CORRECTIONS EFFECTED, FIGURE 2 BECOMES FIGURE 1, AND THREE BECOMES 2.

3. The text describing the figures should be inserted in the text.-DONE
