

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Cancer and Tumor International
Manuscript Number:	Ms JCTI 34832
Title of the Manuscript:	Effect of Ethanol Extract of Abrus precatorious Seed on Testosterone-Induced Benign Prostatic Hyperplasia in Adult Male Wistar Rats
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The authors have not included the desired changes in the revised manuscript (although they say that they have done the necessary changes but not reflect in the revised manuscript). NO changes seem to have been done regarding the first comment about the inclusion of separate para in introduction stating the previous studies done on phytoconstituents and herbals in this area. This is important for the readers to know what else has been done in this area prior to this paper. This disappoints a bit further when authors just mention the changes will be reflected in further studies. As to why they were not done in this study still remains unanswered. Whether lack of facilities or instrumentation or technical skills should be clearly mentioned and a mention of the shortcomings in this study should be done at the end of the manuscript discussion as future plans which could not be done in this study.	Para introduction explaining previous phtotherapeutic agents used in the management of BPH has been added to the introduction segment of the manuscript. We did not carry out phytoconstituents analysis of A precatorious seed and this form part of the shortcomings in our study. However, previous works done on the phytoconstituents and their specific actions have succinctly added in the revised version. Thank you for your vital contributions All corrections made in the manuscript are highlighted in yellow
